FOR IMMEDIATE RELEASE

Onity's CodePro Electronic Locking System Makes Inroads Into Latin America With Installation at Mexican Development Bank

ATLANTA– March 3, 2010 – [Onity](#) announced today that the [CodePro](#)[™] revolutionary PIN code-based electronic locking system, has been selected to secure the commercial banking facilities for a development bank in the Mexican Republic. The installation of 200 CodePro locks was completed in December 2009 at the bank's branch offices across Mexico, and represents the product's debut in the Latin American market. The system is gaining commercial acceptance worldwide because it allows property managers and/or owners to instantly and remotely provide access to specific areas for specific periods of time, without the need for a key or keycard. Onity, one of the world's leading providers of electronic locking solutions, is part of UTC Fire & Security, a unit of United Technologies Corp. (NYSE:UTX).

"Nowhere is security more critical than at a bank, since access to restricted areas must be closely controlled and monitored," said Rafael Ruiz, Managing Director for Onity's Latin American division. "We are proud that Onity's CodePro locking solution has been selected to secure this landmark financial institution."

Designed to meet the specialized access control requirements for facilities in the commercial sector, the system eliminates the need for visitors and staff to visit a reception desk or office, providing increased convenience and privacy. Because the code is software generated, it can be easily sent to users through remote media, such as text messaging or email, making it easy to manage and track all access to individual doors and restricted areas.

The CodePro locking system combines Onity's proven, reliable PIN code access software and electronic locking technology with a unique two-piece modular design and keypad to grant access to

designated users. The locking mechanism is operated with a 7-digit software-generated PIN code that can be changed by the user with his or her personalized code. Some features of the CodePro lock include a robust all-weather design, mechanical key override, and battery-operated.

The enterprise software that is the basis for the CodePro system is backed by more than 10 years of experience by Onity. For additional information, please contact Suzanne Fritz at 1-866-86-ONITY (66489), or visit www.onity.com.
